Submitted (100 MRR-2001) Sanger Centre, Hinxton, Cambridgeshire, Call Sah, UK. Email enquirites: humquery@angor.ac.uk Clone requests. Clonerequestosanger.ac.uk clone mar 12, 2010 this sequence version replaced gi:1255648.

On Mar 12, 2010 this sequence version replaced gi:1255648.

During sequence assembly data is compared from overlapping clones. Where differences are found these are amotated as variations together with a note of the overlapping clone name. Note that the variation amotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with mix a small overlap as described above. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequencial problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one MI3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em., EMBL, Sw.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AL359851 109920 bp DNA linear PRI 09-MAR-2001
Human DNA sequence from clone RP13-192B19 on chromosome Xq24-25,

                                                                                                                                                                                                                               Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                                                         Sequence Quality Assessment:
This entry has been annotated with sequence quality
estimates computed by the pirap assembly program
All manually edited bases have been reduced to quality zero.
Quality ievels above 40 are expected to have less than
1 error. In 2,000 bp.
Base by base quality values are not generally visible from the
GenBank Ital file from the une are available as part
of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                           estimates computed by the Phrap assembly program. I manually edited bases have been reduced to quality Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

on the WORMPEP database can be found at http://www.sngar.ca.u/k/Projecs0/Calegans/wormpep RP4-569D19 is http://www.sngar.ca.u/k/Projecs0/Calegans/wormpep RP4-569D19 is from the library RCCL-4 constructed at the Roswell Park Cancer Institute by the group of Peter de Jong. For further details see http://bacper.cmd/buffalo.edu/
NECTRANT: This sequence is not the entire insert of clone RP4-569D19 It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

The true left end of clone RP4-559D19 is at 1 in this sequence. The true right end of clone RP4-559D19 is at 31286 in this sequence. The start of this sequence overlaps with sequence AL009049.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note="L1WA4 repeat: matches 4845. .5273 of consensus"

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Emi. EMBL; Sw.; SWISSERDY; Tr.; TREMBL; Wp.; WORMPEP; Information
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence was generated from part of bacterial clone contigs of Munan chromosome 22, constructed by the Sangar Centre Chromosome 22 Mapping Group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       arbitrary. Gaps between the contiggs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it, is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Center project intomation

NOTE: This is a "working draft' sequence. It currently consists of 70 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as trues of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as sesones it is available and the accession number will be preserved.

This entry has been amnotated with sequence quality
This entry has been amnotated with sequence quality
estimates computed by the Pinapa assembly program.
All manually edited bases have been reduced to quality zero.
Quality leads above 40 are expected to have less than
1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the
GenBank Ilat file formet but are available as part
                                                                                                                       Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.
     All manually edited bases have been reduced to quality zero. Quality levels abbove 40 are expected to have less than 1 error in 10,000 bp.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              124985
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 111585
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NOTE: Estimated insert size may differ from sequence length (see http://www.hggo.bcm.unc.edv/docs/docabank_date_f.data.html).
NOTE: This is a "working draft' sequence. It currently consists of 5 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigg are represented as truns of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently compares of a contige. The true order of the pieces is not known and their order in this sequence record is exthirary. Gaps between the contige are represented as tuns of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as noons as it is available and the accession number will be preserved.

                                                                                              Sequence:
                                                                                                                                      Searched:
                                              Run on:
```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
